

ENDURable SEALER™

ENDURable SEALER delivers outstanding durability and chemical resistance. The unique 2-component chemistry used to formulate ENDURable SEALER, provides the highest level of resistance to UV rays, keeping the sealer in excellent shape for many years, even under the harshest sun exposure. Available in a true matte and gloss. Perfect for interior and exterior applications.

ENDURable F1 SEALER™

ENDURable F1 SEALER is an excellent alternative to solvent-based sealers. Product is very easy to apply and provides good basic chemical resistance, including good chlorine resistance. Standard ENDURable SEALER is recommended when motor fluids may be introduced to the surface. Durability is excellent for a 1-component sealer and consumer can expect the product to last twice as long as standard acrylic sealers. Low VOC content provides a green benefit. Available in matte or gloss, both at the same great price point. In addition, product is an excellent finish over standard ENDURable SEALER.

ENDURable INCEPTIVE COATING™

ENDURable INCEPTIVE COATING is a unique product. As one of the most breathable coatings on the market, the product may be applied to concrete merely 24 hours after the pour. Product also achieves one of the highest bonds of any coating on the market. This allows the product to be a perfect primer coat, prior to application of most sealers or coatings when bonding is a critical issue. Product also works well as a buildable coating. Finishing the coating with ENDURable CONCRETE STAIN and ENDURable SEALER is highly recommended.
